

Hosted services - make the jump to a cloud infrastructure

- Reduces capital expenditure
- Easily scalable
- Simplified management and support
- Highly resilient

Make the jump to the Premier IT cloud

Cloud computing... deMISTified

Cloud computing is a highly scalable, cost-effective, on-demand hosting solution that enables you to store and access your systems online.

There is no need to purchase costly hardware, or spend time maintaining and updating it.

All the resource you need is already available...

Use as you need, pay as you use

Premier IT's cloud infrastructure services form part of our hosted services offering and offer unrivalled scalability, enabling you to react and adapt quickly to the demands of your business. We regularly upgrade our infrastructure to ensure that you always have access to the latest industry standard technologies.

You can then increase your resource instantly whenever you need, and only pay for what you use!

Using our cloud infrastructure services is a reliable, manageable and resource-efficient way of hosting any and all of your business applications.

Some of our most popular services include...

Email hosting

- Unlimited mailboxes
- Anti-virus & anti-spam software
- Shared/distribution groups
- Calendars, contacts & tasks
- Email archiving & back up
- Multiple domains
- Linux & Microsoft Exchange platforms

Outcomes:

- Access email anywhere, any time
- Fast & reliable connection
- Enable remote working
- Retrieve deleted emails
- No hardware or software requirements
- Increase capacity when required
- Reduce downtime during office closures

Online backup

- Full initial & incremental backups
- Local vault data replication
- Data encryption for enhanced security
- Server hard disk images
- Software to monitor corrupt files
- Network status email notifications

Outcomes:

- Fast & efficient data recovery
- Robust and reliable disaster recovery strategy
- Reduce manual input with automated backups
- Eliminate tape drive purchase & storage costs
- No hardware and tape drive failures
- Best hardware & software without ownership costs

Virtual Office

- Hosted exchange & business applications
- Online backup/data retrieval
- Anti-virus & anti-spam software
- Desktop & applications leasing/hosting
- Scalable performance
- Controlled user access
- Remote monitoring & support

Outcomes:

- Scalable and customisable
- Store & access from one location
- Secure network environment
- Quick return on investment
- Increase staffing capacity
- Operations across multiple locations
- Invaluable part of DR strategy

Disaster Recovery – we've got it covered

Failing to implement a comprehensive Disaster Recovery (DR) strategy could leave you open to losing not just information, but also considerable revenue.

If the worst happens, be sure to safeguard your two most important assets – your **data** and your **people**.

Premier IT can offer IT consultancy and strategic advice, alongside a series of hosted services and data recovery solutions, to provide your organisation with a comprehensive DR strategy.

Data Disaster Recovery (DDR)

Without your data, you do not have a business to run.

We can offer a series of data recovery solutions and hosted services – including email hosting, online backup and virtual office – all within a secure cloud infrastructure.

Our cloud infrastructure services remove the need to rely on your own hardware and software, and will allow you to recover fully and quickly in the event of a data loss.

People Disaster Recovery (PDR)

Our PDR strategy solutions can enable your staff to continue working in the event that your premises are inaccessible.

Implementing a virtual office solution means that your business is not dependent on a physical environment.

In the event that your office building is destroyed or inaccessible, your staff can still access all the files and systems they need through our cloud infrastructure.

We can also provide room hire facilities for your staff to access your systems and continue working as normal. Combining this with an online backup solution will allow you to access the backed up data directly through a Virtual Private Network (VPN) connection, from anywhere in the world.

Building a bullet-proof DR strategy for your organisation...

Using a cloud infrastructure is your quickest route to a full business continuity plan.

We can give you peace of mind by managing your DR strategy for you, from planning and design through to implementation and ongoing support.

What can we do... to meet all your IT needs

IT Strategy - including IT consultancy, healthchecks, upgrades, IT relocations and disaster recovery

Network Architecture - including wireless network installations, network monitoring and disk to disk backup solutions

IT Support - including onsite/remote support, helpdesk services and interim staff cover
